## Work Experience

---

### Tech Formation ( 2011 – Present )

#### **HauteTrader – A Trading Portal of Fashion Items ( <https://www.hautetrader.com/> )**

HauteTrader is for the fashionable girl, whose style is constantly evolving, yet feels she has nothing to wear. To her – my client offers a novel concept in online designer fashion trading!

Member can simply trade the designer fashions that she has for the fashions that she craves. After every successful fashion trade, she gets a reward currency, Haute-Points, which she can use to buy more designer fashions . . . ALL without breaking or even opening the bank!

- I have led the development of this project from scratch to delivery where requirements understanding, designing the database structure, creating UML diagrams, development, and deployment were the various levels.
- This project was developed in PHP using CakePHP framework, My SQL was used as a database system, besides this HTML5, CSS3, Bootstrap, and jQuery were some other key technologies that were used.
- Various kind of third party email APIs like Sendgrid, MailChimp and SES have been integrated.
- Multiple payment processors, text messages services, address verification APIs and shipping services have been also integrated.

### **JamesAllen – The Most Prized Diamonds Site ( <https://www.jamesallen.com/> )**

Four creative minds, Oded Edelman, James Schultz, Michele Sigler, and Dean Lederman, combined their talents to create JamesAllen.com – and it soon became the largest privately held online diamond and bridal jewelry retailer in the world. Their mission: to offer consumers online the highest quality diamonds and largest selection at the best price.

- I have worked in this project as a senior developer and my role was involved from requirements understanding, designing the database structure, developing backend APIs and various administration analytical screens.
- This project was developed in PHP 7 using the Laravel framework, My SQL was used as a database system, besides this HTML5, CSS3, Bootstrap, and React were some other frontend technologies were used.
- On the server side (AWS) multiple EC2 have been configured under the load balancer, for the database we have used RDS with multiple read replica based cluster servers. Besides this S3 was used for static content with CloudFront.
- Multiple email APIs, multiple payment processors, text messages services, EMI Splitter APIs and shipping services have been also integrated.

### **WeddingListCo – The Leading Bridal Registry ( <https://www.weddinglistco.com.au/> )**

Wedding List Co is the bespoke registry of choice for couples who appreciate great style and world-class service. Boasting exclusive brands, unique gifts and wishing well. From beautiful homewares to electronics, artwork to bedding, Coco Republic and Urban Couture furniture to Honeymoon and Contribution registry, Wedding List Co boasts over 200 top brands

- I have led the development of this project from scratch to delivery where requirements understanding, designing the database structure, slicing, development, and deployment were the various levels.
- This project was developed in ASP.NET Core using MVC architecture, MS SQL Server was used as a database system, besides this HTML5, CSS3, Bootstrap, and jQuery were some other key technologies that were used.
